Clé d'EX 223

January to June 2025

Clé d'EX 223

January to June 2025

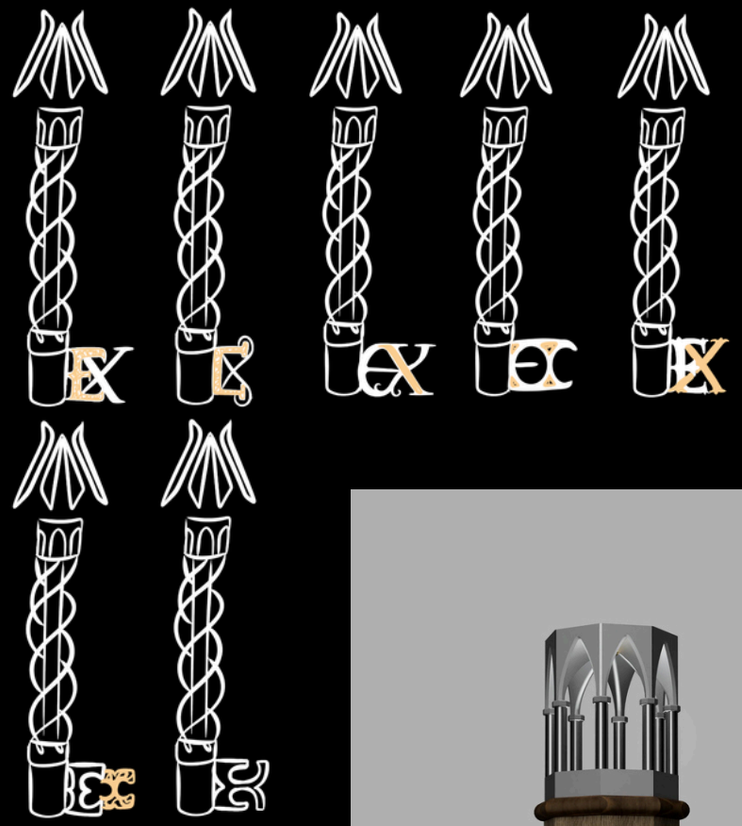

Born from a tradition dating back to 1895 in the city of Cluny, this handcrafted artwork showcases the hard work of the entire Class of 2023 of Arts et Métiers, as it brings together every craftsmanship techniques learnt throughout our curriculum - ranging from foundry to woodworking, with CAD and machining along the way. On this key, symbol of the end of our journey through Engineering School, all of our names are carefully arranged using Python, then meticulously hand painted in a colour pattern to reveal this stained glass like piece when backlit. This two meter tall artwork is passed around in the class until no one remains, before ultimately finding its way to the Liancourt Museum.

Clé d'EX 223

An Artwork in the making

When designing this piece, many rules needed to be respected. It had to follow precise dimensions, include specific elements like the logo of our class I had designed back in first year, the mention ‘EX’ to signify ‘Exance’ as in the end of our journey, and the overall shape of a key. From there, many ideas sprouted. It needed to be cohesive, strong and tall standing but also elegant and refined. We decided to include lights and electronics, which had not been done since 1989, which would then reveal the names of our class as we light it up. We also had decided to go with the theme of our gala, and as a nod to the most emblematic piece of the night, I included mimicked stained glass as the main shank of the key.

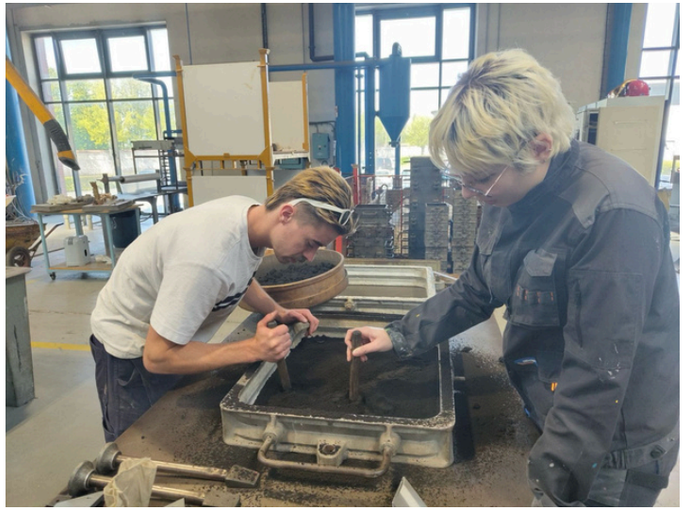

Clé d'EX 223

Bringing the project to life

Many hardworking groups were formed to bring to life this ambitious design. Some were assigned to the foundry, some to the woodworking, while others worked on the forged torsades, not to mention the machining of the cathedral-like piece. I handled the designing of the stained-glass shank as well as its painting, but also took part in the casting of the ZAMAC parts - an alloy similar to but easier to cast than aluminium and much denser - and the golden brass parts. In total, around 2,000 hours of craftsmanship work spent between January and June of 2025 to give this design a tangible form. The response was overwhelming, with the project generating tremendous excitement on LinkedIn and coverage in local newspapers.

Internship Productions

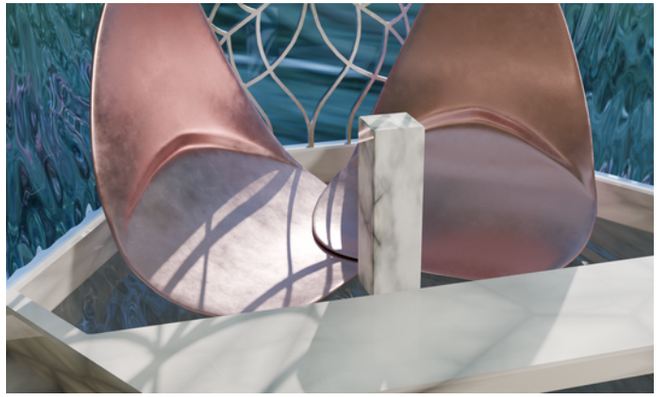

As a Designer

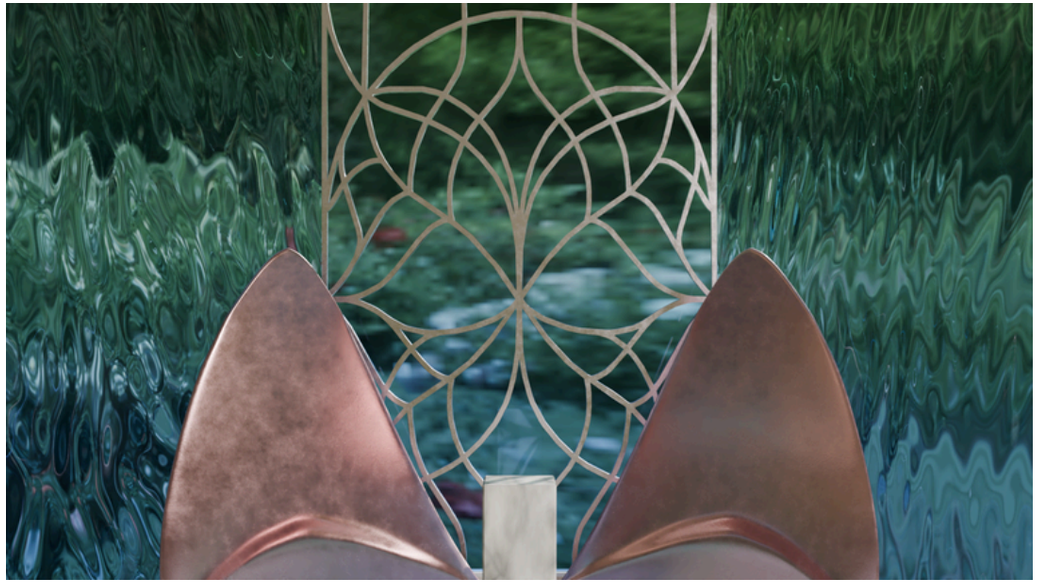

Van Cleef & Arpels

January 2026

As part of my interview as Van Cleef & Arpels, I was tasked with a creative brief on a product that I chose - The Water Lily Bloom Automaton. Placing the lily back in its natural habitat, the automaton sits at the center of a blooming water lily.
Visitors cross a small bridge one by one; the trickle of water slows them, and the bloom becomes an unexpected pause. It reveals a butterfly matching the room's central pane.
Light, water and slow movement carry the visitor into a nature larger than the room, the technology hidden behind its hypnotic beauty.

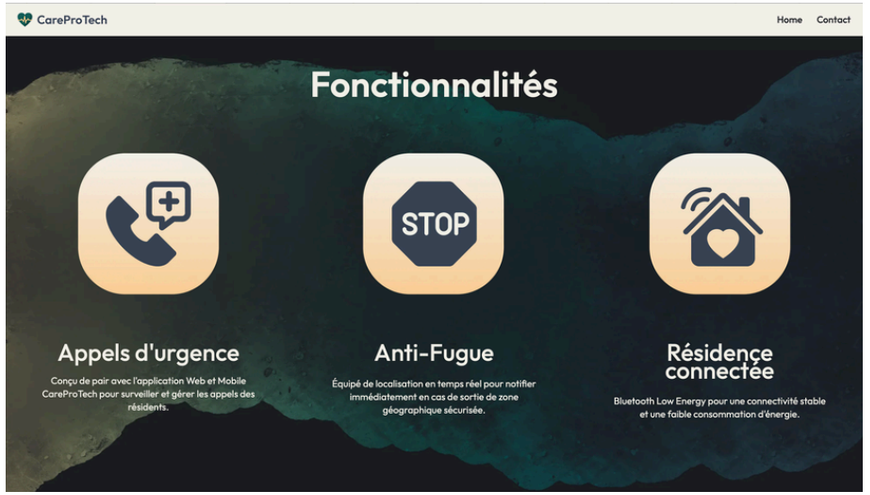

CarePro Tech Website

June 2024

CareProTech is a startup committed to bringing tech in the medical field. Their product - a connected bracelet designed to protect patients in nursing homes - was conceived for the sole purpose of helping the medical personnel alleviate their workload. To provide a clearer understanding of the product, I created a user-friendly e-commerce website enabling nursing homes to navigate through it and evaluate the relevance of CareProTech's solution for their specific needs. This website was the foundation for CareProTech's branding and visual identity, who are currently using my designs.

3D Modelling

For CareProTech - June 2024

To bring a better understanding of the product, I 3D modelled in Blender a full render of the bracelet which I then animated for educational purposes. The goal was to create a demonstration of the product in use as well as put an image to a brand new concept. This model was carefully put into place using various angles from the technical data sheet, and realistically rendered to mimic the real materials used in the bracelet and the different textures these materials created.

Grand Gala des Fignos

Gala Flyer Design

September to December 2024

For the annual gala the students create, a promotional poster was made using Procreate, featuring a digitally drawn picture representing the statue a medieval female figure. This flyer was printed in an A5 format to be distributed to passer-by around the city to attract attendees and communicate the gala's theme in a visually pleasing manner. The gala brought up together more than 2,000 guests and raised 30k€ which were gifted to the class of 2024 for their own gala the year after.

Various Keepsakes

September to December 2024

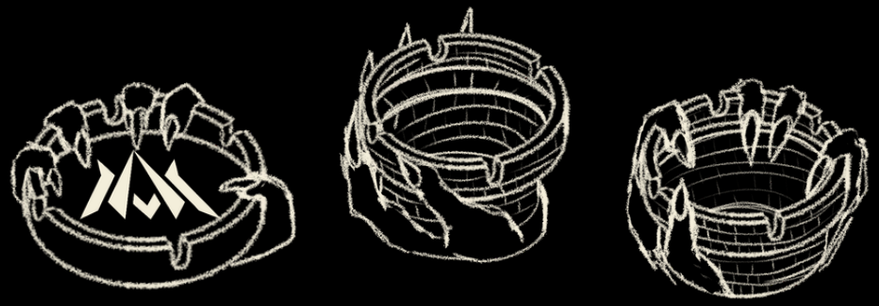

To commemorate our work and celebrate the gala, I designed a collection of bespoke keepsakes. Each item was thoughtfully crafted to reflect the event's elegance and serve as a memorable token for our guests as well as the many students whose hard work shaped the gala's success, embodying both creativity and the spirit of the occasion. I created an embroidered patch that sold out within an hour, together with an ecocup shared across all the evening's bars, which guests and students were allowed to keep.

Vanity Trays

June to December 2024

From June to December, multiple designs and attempts were made to satisfy the many constraints of foundry and the limits of the aluminium and its ability to be cast. Traditionally distributed during ‘Grand Gala des Fignos’, these vanity trays are gifted to the guests and often join the display case of all the previous trays made by students before us. Thanks to CNC machining, a mould is crafted, bringing the sketches to life as the trays take shape.

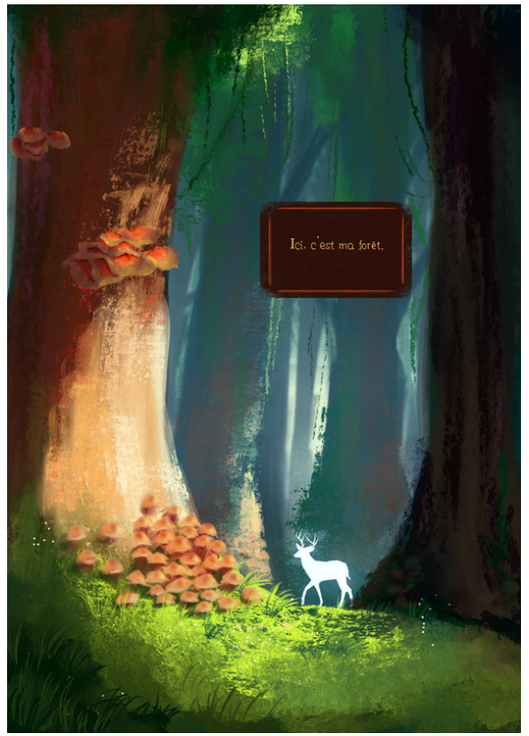

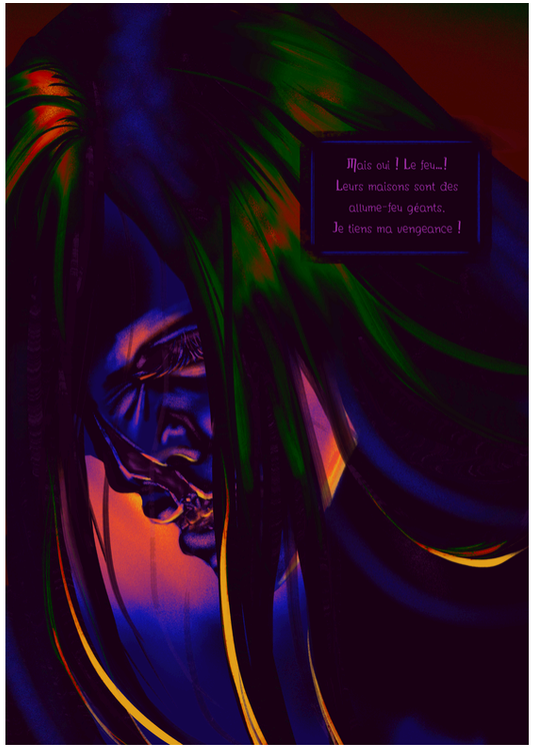

Personal Projects

As a freelance artist and illustrator

Flash in the Pan

January to August 2026

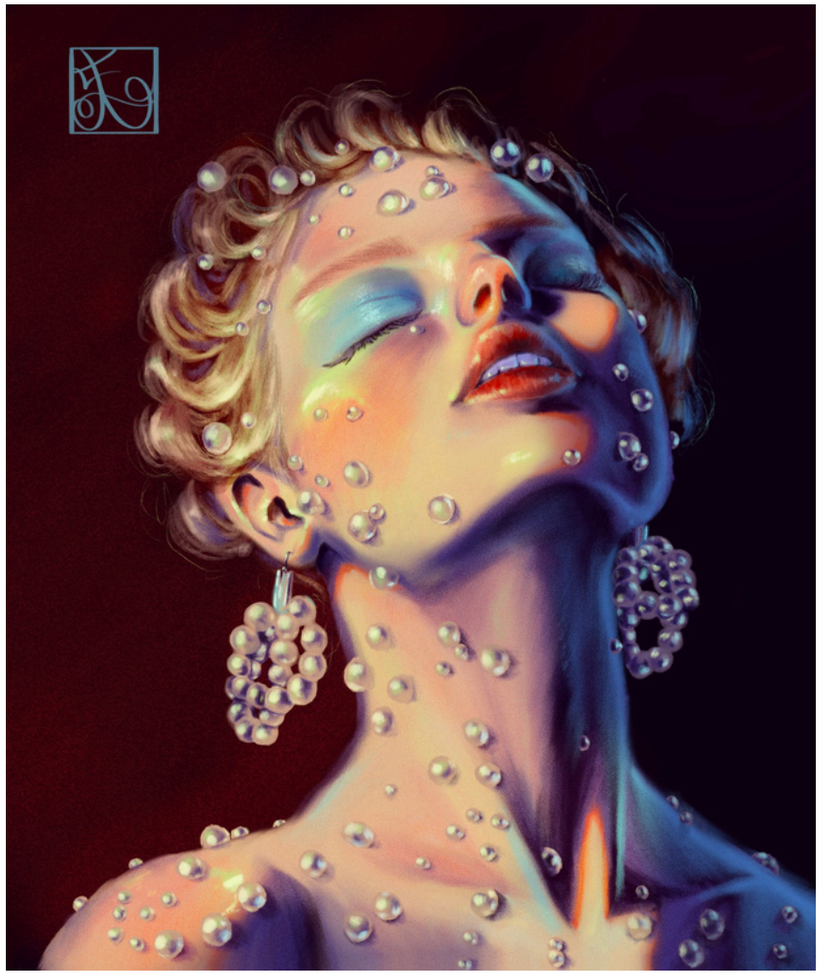

Flash in the Pan (in French*, Feu Follet*) follows the life of small fairies inspired by insects, who live inside of mushrooms. The fairies of the canopy have been living off the work of their ground-dwelling kin for far too long, and the latter have had enough. One spark is all it would take for revolution to break out...

Pearlescent

15.12.2025

This is a digital portrait made in Procreate and executed in a style that emphasizes dramatic lighting, vibrant, saturated colors, and textural detail. The rendering suggests techniques found in hyperrealism, yet with an expressive use of color and light that elevates it beyond a mere photographic copy. She wears large, elaborate, cluster-style pearl drop earrings that echo the motif of the small spheres covering her body, unifying the design.

Crystal tears

07.12.2025

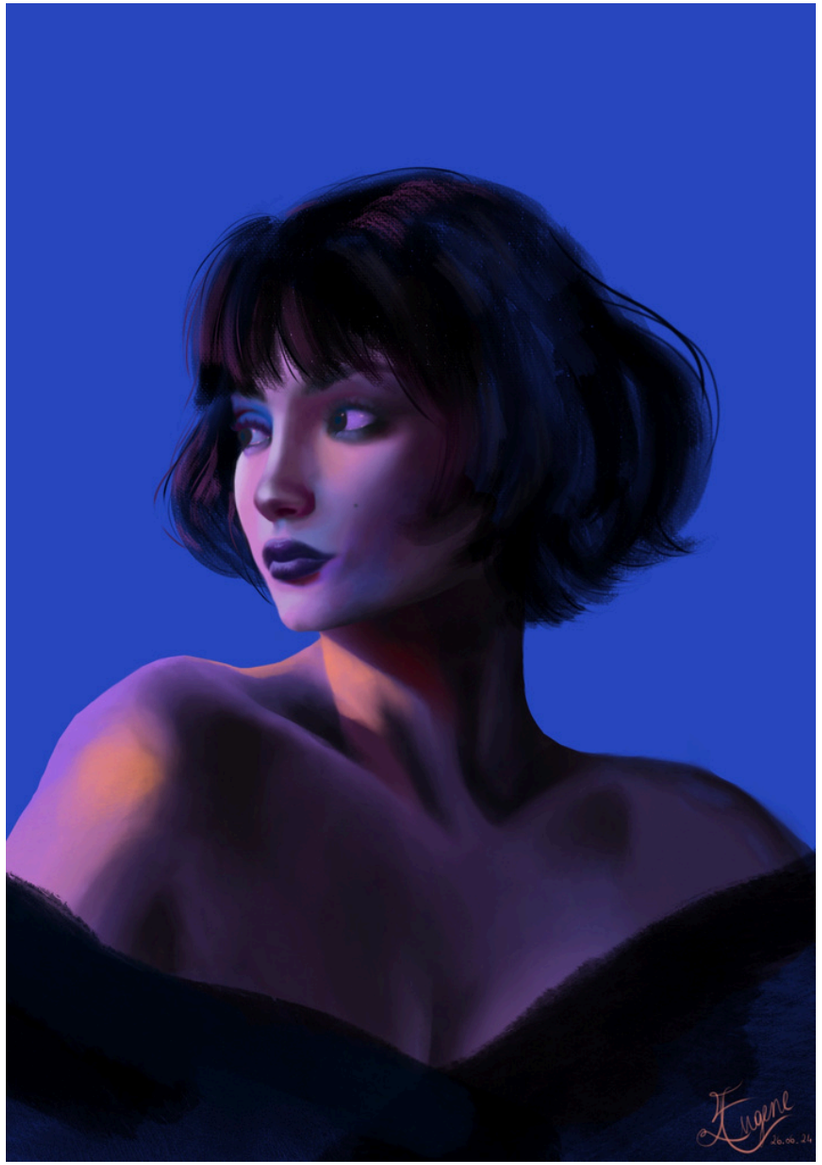

This piece continues the conceptual exploration started in "Pearlescent," solidifying the work as part of a cohesive series on dramatic adornment, emotion, and texture. Like its companion, this is a digital portrait utilizing extreme lighting and saturated color, but it pivots to a theme of sharper intensity with red crystals that mimic tears rolling down her face.

Woman Looking back

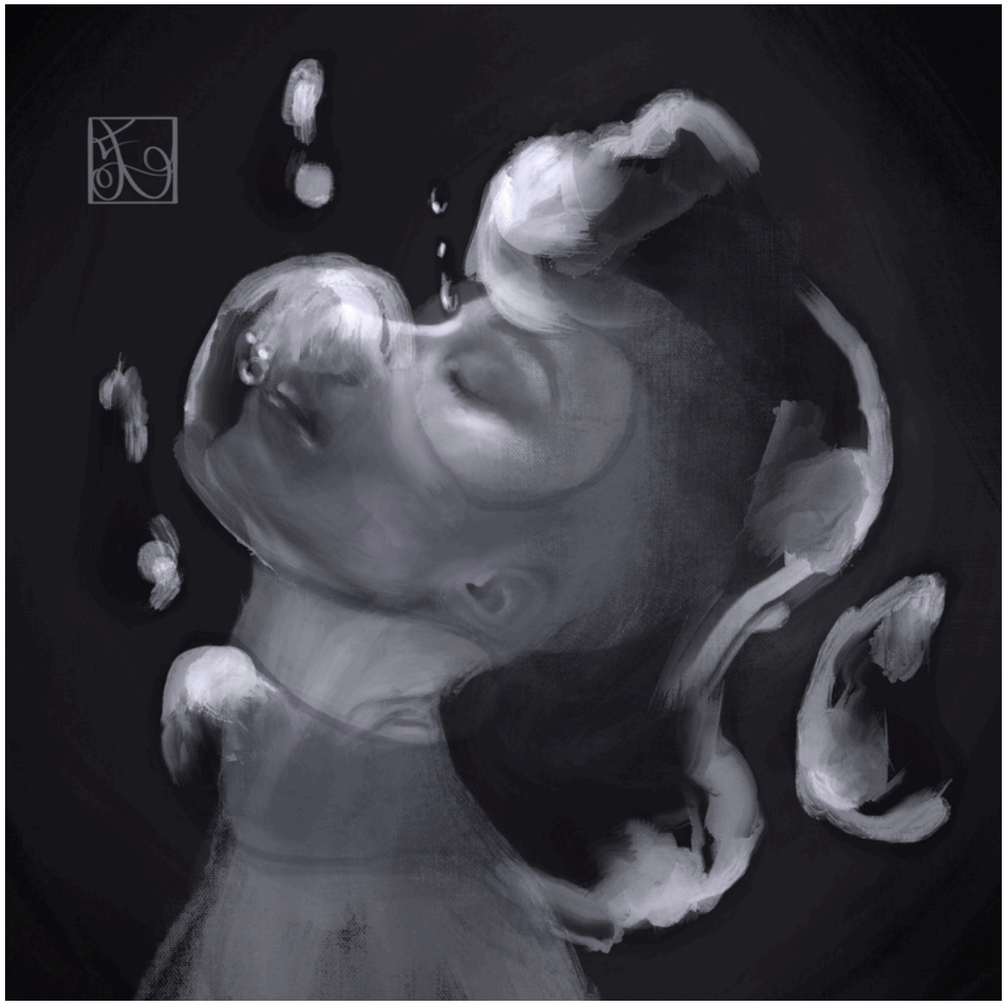

26.06.2024

This painting was created digitally using Procreate. I carefully picked a colour palette of various values before turning on a black and white filter on my tablet. This allowed me to pick my colours at random, based solely on their values to create a cohesive black and white piece. This process then revealed a fun portrait when I turned off the filter. The painting of this piece was originally meant as a training to work better on my lighting in portraits, but thanks to the colours I chose, turned out to be a colourful portrait that stands out due to its unconventional tones.

Drowning

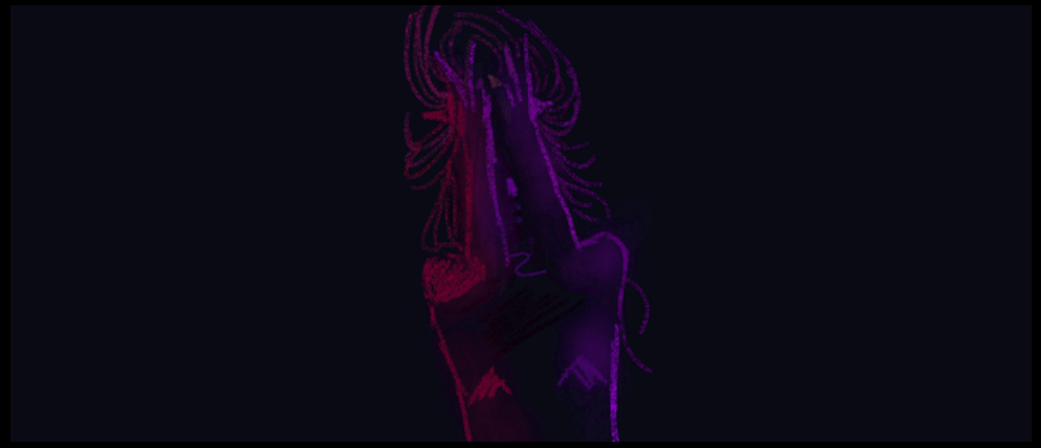

25.11.2023

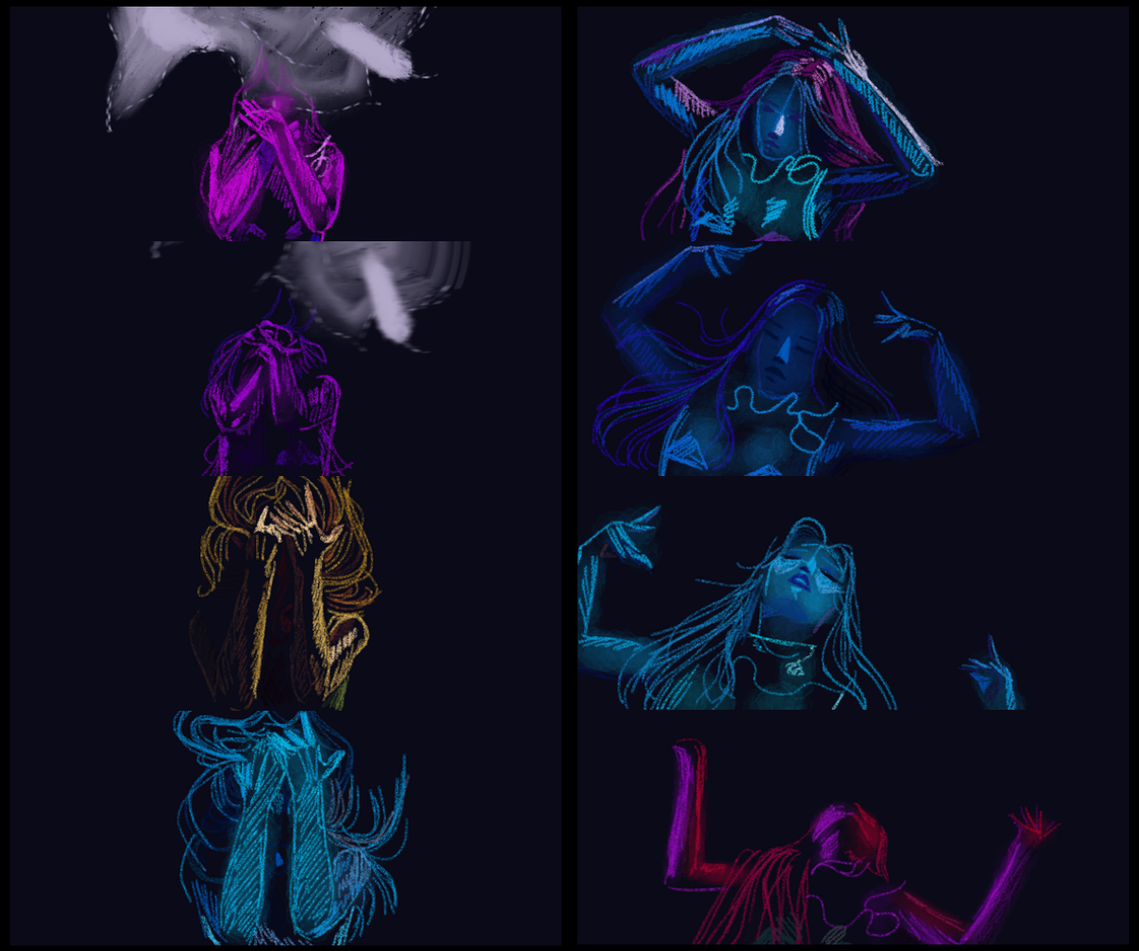

Created digitally using Procreate. This painting represents an androgynous figure who seems to be stuck in bubbles that defy gravity, therefore preventing them from breathing as a tear falls from their eyes. This painting is completely in black and white, with dark tones to signify feeling stuck and struggling to rise to the surface for air.

Traditional Animation

2020

Frames of a hand drawn animation, Procreate. Each frame was drawn carefully following a specific movement to create a dynamic scene.

Study of an eye blinking

2020

Semi-realistic eye, Procreate. The goal of this piece was to mimic an eye blinking rapidly. Each frame of this animation was drawn by hand based on the first illustration. As the lid gently closes and reopens with a subtle, unexpected motion, it goes unnoticed by everyone due to the speed of the movement.
